On the Origin of Species

BY MEANS OF NATURAL SELECTION,

OR THE
PRESERVATION OF FAVOURED RACES IN THE STRUGGLE
FOR LIFE.

By Charles Darwin, M.A.,

Fellow Of The Royal, Geological, Linnæan, Etc.,
Societies;

Author Of 'Journal Of Researches During H.M.S. Beagle's
Voyage Round The World.'

LONDON:
JOHN MURRAY, ALBEMARLE STREET.
1859.

“But with regard to the material world, we can at least go so far as this—we can perceive that events are brought about not by insulated interpositions of Divine power, exerted in each particular case, but by the establishment of general laws.”

W. WHEWELL: *Bridgewater Treatise*.

“To conclude, therefore, let no man out of a weak conceit of sobriety, or an ill-applied moderation, think or maintain, that a man can search too far or be too well studied in the book of God’s word, or in the book of God’s works; divinity or philosophy; but rather let men endeavour an endless progress or proficience in both.”

BACON: *Advancement of Learning*.

Down, Bromley, Kent,
October, 1st, 1859.

Contents

INTRODUCTION.

1. VARIATION UNDER DOMESTICATION.

2. VARIATION UNDER NATURE.

3. STRUGGLE FOR EXISTENCE.

4. NATURAL SELECTION.

5. LAWS OF VARIATION.

6. DIFFICULTIES ON THEORY.

7. INSTINCT.

8. HYBRIDISM.

9. ON THE IMPERFECTION OF THE GEOLOGICAL RECORD.

10. ON THE GEOLOGICAL SUCCESSION OF ORGANIC BEINGS.

11. GEOGRAPHICAL DISTRIBUTION.

12. GEOGRAPHICAL DISTRIBUTION—*continued*.

13. MUTUAL AFFINITIES OF ORGANIC BEINGS: MORPHOLOGY:

14. RECAPITULATION AND CONCLUSION.

INDEX

DETAILED CONTENTS. ON THE ORIGIN OF SPECIES.

INTRODUCTION.

CHAPTER I. VARIATION UNDER DOMESTICATION.

Causes of Variability.

Effects of Habit.

Correlation of Growth.

Inheritance.

Character of Domestic Varieties.

Difficulty of distinguishing between Varieties and Species.

Origin of Domestic Varieties from one or more Species.

Domestic Pigeons, their Differences and Origin.

Principle of Selection anciently followed, its Effects.

Methodical and Unconscious Selection.

Unknown Origin of our Domestic Productions.

Circumstances favourable to Man's power of Selection.

CHAPTER 2. VARIATION UNDER NATURE.

Variability.

Individual Differences.

Doubtful species.

Wide ranging, much diffused, and common species vary most.

Species of the larger genera in any country vary more than the species of the smaller genera.

Many of the species of the larger genera resemble varieties in being very closely, but unequally, related to each other, and in having restricted ranges.

CHAPTER 3. STRUGGLE FOR EXISTENCE.

Bears on natural selection.

The term used in a wide sense.

Geometrical powers of increase.

Rapid increase of naturalised animals and plants.

Nature of the checks to increase.

Competition universal.

Effects of climate.

Protection from the number of individuals.

Complex relations of all animals and plants throughout nature.

Struggle for life most severe between individuals and varieties of the same species; often severe between species of the same genus.

The relation of organism to organism the most important of all relations.

CHAPTER 4. NATURAL SELECTION.

Natural Selection: its power compared with man's selection, its power on characters of trifling importance, its power at all ages and on both sexes.

Sexual Selection.

On the generality of intercrosses between individuals of the same species.

Circumstances favourable and unfavourable to Natural Selection, namely, intercrossing, isolation, number of individuals.

Slow action.

Extinction caused by Natural Selection.

Divergence of Character, related to the diversity of inhabitants of any small area, and to naturalisation.

Action of Natural Selection, through Divergence of Character and Extinction, on the descendants from a common parent.

Explains the Grouping of all organic beings.

CHAPTER 5. LAWS OF VARIATION.

Effects of external conditions.

Use and disuse, combined with natural selection; organs of flight and of vision.

Acclimatisation.

Correlation of growth.

Compensation and economy of growth.

False correlations.

Multiple, rudimentary, and lowly organised structures variable.

Parts developed in an unusual manner are highly variable: specific characters more variable than generic: secondary sexual characters variable.

Species of the same genus vary in an analogous manner.

Reversions to long-lost characters.

Summary.

CHAPTER 6. DIFFICULTIES ON THEORY.

Difficulties on the theory of descent with modification.

Transitions.

Absence or rarity of transitional varieties.

Transitions in habits of life.

Diversified habits in the same species.

Species with habits widely different from those of their allies.

Organs of extreme perfection.

Means of transition.

Cases of difficulty.

Natura non facit saltum.

Organs of small importance.

Organs not in all cases absolutely perfect.

The law of Unity of Type and of the Conditions of Existence embraced by the theory of Natural Selection.

CHAPTER 7. INSTINCT.

Instincts comparable with habits, but different in their origin.

Instincts graduated.

Aphides and ants.

Instincts variable.

Domestic instincts, their origin.

Natural instincts of the cuckoo, ostrich, and parasitic bees.

Slave-making ants.

Hive-bee, its cell-making instinct.

Difficulties on the theory of the Natural Selection of instincts.

Neuter or sterile insects.

Summary.

CHAPTER 8. HYBRIDISM.

Distinction between the sterility of first crosses and of hybrids.

Sterility various in degree, not universal, affected by close interbreeding, removed by domestication.

Laws governing the sterility of hybrids.

Sterility not a special endowment, but incidental on other differences.

Causes of the sterility of first crosses and of hybrids.

Parallelism between the effects of changed conditions of life and crossing.

Fertility of varieties when crossed and of their mongrel offspring not universal.

Hybrids and mongrels compared independently of their fertility.

Summary.

CHAPTER 9. ON THE IMPERFECTION OF THE GEOLOGICAL RECORD.

On the absence of intermediate varieties at the present day.

On the nature of extinct intermediate varieties; on their number.

On the vast lapse of time, as inferred from the rate of deposition and of denudation.

On the pooriness of our palæontological collections.

On the intermittence of geological formations.

On the absence of intermediate varieties in any one formation.

On the sudden appearance of groups of species.

On their sudden appearance in the lowest known fossiliferous strata.

CHAPTER 10. ON THE GEOLOGICAL SUCCESSION OF ORGANIC BEINGS.

On the slow and successive appearance of new species.

On their different rates of change.

Species once lost do not reappear.

Groups of species follow the same general rules in their appearance and disappearance as do single species.

On Extinction.

On simultaneous changes in the forms of life throughout the world.
